

K&B introduces the new software platform SYSTEM 8 Ultimate. The software is compatible with all other SYSTEM8 modules and introduces new features for a seamless interaction with your hardware during test and fault-finding procedures.

SYSTEM 8 Ultimate user interface

The graphical user interface was modified and the menu moved to the side to provide clearer and quicker access to the instruments. This toolbar can be reduced to single icons to offer more usable space for media content in TestFlows (videos, PDFs, images, documents etc.). The arrangement of the instruments can be modified using the *Instrument Menu Manager*.

At the heart of SYSTEM 8 Ultimate is the concept of TestFlow, an approach to testing and fault finding that not only speeds up operation – and thus turnover – but also allows the system to be used by semi-skilled operators.

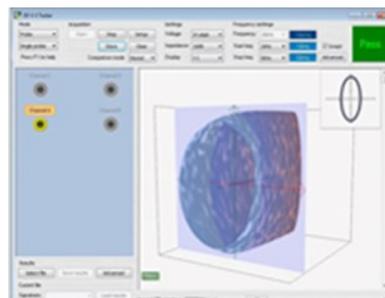

SYSTEM 8 Ultimate with TestFlow

TestFlow transforms fault finding into a methodical, step by step procedure that reduces the risk of inaccurate measurements by recording all the parameters of a test. Technicians can write a test procedure, or TestFlow, for a particular PCB by setting up each stage of the process and recording the results. They may also include their knowledge of the board through schematics, images, videos or even notes and instructions to assist with the task. Low level operators need only follow the instructions on-screen to carry out an extensive test sequence on even the most complicated boards.

SYSTEM 8 Ultimate 3D V-I Tester

With the release of the Advanced Matrix Scanner module, K&B introduces the new software platform **SYSTEM 8 Ultimate**. The software is compatible with all other SYSTEM 8 modules and introduces new features for a seamless interaction with your hardware during test and fault-finding procedures. SYSTEM 8 Ultimate was developed alongside the Advanced Matrix Scanner module (AMS) and therefore offers two new instruments: the 3D V-I Tester and the Matrix V-I Tester.

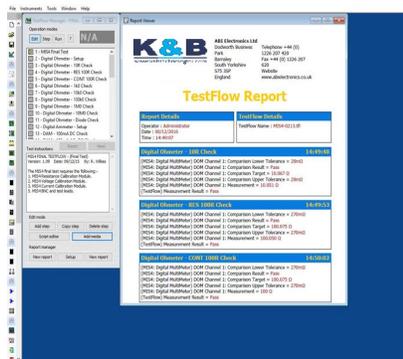

SYSTEM 8 Ultimate Redesigning

SYSTEM 8 Ultimate introduces new instruments for the BFL and the MIS modules. Following user reviews, enhanced instruments were developed to facilitate the use of the software. Note that these instruments can be redesigned easily to suit any application.

SYSTEM 8 Ultimate with Report

With SYSTEM 8 Ultimate, the TestFlow Manager provides a reporting function that can be customised for each step. The Report Manager enables users to log and display a complete range of data in a customisable report. The report template can be modified, for instance to include a company logo, using a standard html editor.

SYSTEM 8 Ultimate Software

- ◆ Software lifetime free with including all future update.
- ◆ Software multiuser as many PCs as required without extra charge.
- ◆ Software must be able to run an automatic Self-test for all Sections individually. The self-test must provide internal fault information and on-line help facility in case of any problem.
- ◆ Software or its updates must be easily downloadable from the website as and when required or else we should provide the link for downloading software and its updates as per the need of user.
- ◆ Software must be able to smoothly communicate with other applications (software/hardware).
- ◆ Software must have the ability of creating test procedures in Testflow. In TestFlow, the user must be able to add media information including PDFs, Microsoft Office documents, images, videos and Webpages (HTML) in test procedure.
- ◆ TestFlow can be logically programmed as per user requirement.
- ◆ Software should be capable to store all measurement, results & setup and show PASS/Fail results by comparing with old saved results manually and automatically.

***Note: We pursue a policy of continuous development & product improvement. Specifications may be subject to change, without notice.
